

# <WebSafeColors.info>

The **color chart** below **lists the 216 web safe colors** (as per the informal web safe colors standard). The respective **hex color code and rgb color code are displayed** over each color swatch. The hex color code is really just an rgb value that is in *hexadecimal notation*. The rgb color code uses decimal notation and separates each component (red, green and blue) by a comma. Observe the way that incremental changes to the hex/rgb values influence color. Read our [Learn](#) and [FAQ](#) sections for more information.

```
H He Hex H H He He He He H H He Hex:      H H He Hex:      H Hex:      HeHex:
H H He Hex # H H H He H H H Hex H H H H H Hex H H H H Hex: #ffffff
R RG R R R RC R R R RGE R R R R RG R R R R RGE R R R R RGB:
rg rgt r rg rg rgl r rg rg rgb( r rg rg rgb( r rg rg rgb(255,255,255)
```

**Pro Tip:** Quickly access the 216 color codes above by visiting <http://216.codes/>
